Installation

- 1. Attach the side collars to the wheel.
- On the right side, place the wheel between the fork legs and insert the front axle shaft, through the right fork leg and wheel hub.
 - Avoid scratching the brake pads, carefully fit the brake disc between the pads.

NOTICE

When installing a wheel or caliper into original position, carefully fit the brake disc between the pads to avoid scratching them.

3. Tighten the axle shaft.

Torque: 51 lbf·ft (69 N·m, 7.0 kgf·m)

- **4.** Lower the front wheel on the ground.
- **5.** Apply the brake lever several times. Then, pump the fork several times.

6. Tighten the axle pinch bolt.

Torque: 16 lbf·ft (22 N·m, 2.2 kgf·m)

- **7.** Raise the front wheel off the ground again, and check that the wheel rotates freely after you release the brake.
- **8.** Lower the front wheel on the ground again.

If a torque wrench was not used for installation, see your dealer as soon as possible to verify proper assembly. Improper assembly may lead to loss of braking capacity.
